

ADOS-2 Introductory + Toddler Bundle

Autism Diagnostic Observation Schedule – Second Edition

Who is the training for?

Psychologists, speech pathologists, occupational therapists, paediatricians, and psychiatrists.

What is the ADOS-2?

The Autism Diagnostic Observation Schedule Second Edition (ADOS-2) is a semi-structured, standardised assessment of communication, social interaction, and play. It provides a series of standardised contexts in which the individual's social communication, and repetitive, stereotyped behaviours can be observed. It has been designed to assist in the diagnosis of autism spectrum disorder and is a complementary instrument to the Autism Diagnostic Interview Revised (ADI-R). Standardised toys and activities are used to present opportunities for social and communicative interaction with the examiner. A diagnostic algorithm consistent with DSM-V and ICD-10 clinical diagnoses is generated.

The Toddler Module of the ADOS-2 is a fifth module that is specifically designed to assess children with limited expressive language who are between the ages of 12 and 30 months.

What does the training include?

This three-day workshop introduces the ADOS-2 as an assessment tool and is a first step in the process for establishing reliability. During this training you will:

- Learn about how the ADOS-2 works
- Watch and code video recordings of demonstrations of **Modules 1-4 + Toddler Module**
- Discuss administration, coding, and reliability

Completion of pre-course materials is required.

Prerequisite Training

For child & adolescent clinicians:

*Autism Assessment Fundamentals
and Co-occurring Conditions*

OR

For adult clinicians:

*Adult Autism Introductory +
Adult Autism Advanced*

Please see our FAQs on our website for further information on prerequisites.
